# Creep and Hygrothermal Effects in Concrete Structures

July 27, 2017

Springer

# Contents

## Part I Fundamentals

<b>1</b>	<b>Introduction: How the Theory Evolved and How It Impacts Practice</b>	<b>3</b>
<b>2</b>	<b>Fundamentals of Linear Viscoelasticity</b>	<b>9</b>
2.1	Characterization of Creep by Compliance Function	9
2.2	Integral Stress-Strain Relation	18
2.3	Relaxation Function	21
2.4	Viscoelasticity Under Multiaxial Stress	24
2.5	Operator Notation	26
<b>3</b>	<b>Basic Properties of Concrete Creep, Shrinkage and Drying</b>	<b>29</b>
3.1	Sources and Characterization of Time-Dependent Deformations	29
3.2	Asymptotic Modulus	35
3.3	Basic Creep	37
3.4	Creep Coefficient	42
3.5	Mean Cross-Section Shrinkage	43
3.6	Mean Drying Creep in the Cross Section	48
3.7	Common Misconceptions in Measuring and Defining Creep	51
3.7.1	Incompatible Initial Strain	51
3.7.2	Plotting Creep Curves in Actual, Rather than Logarithmic, Time Scale	52
3.7.3	Creep “Inflation”	53
3.7.4	Is Tensile Creep Different from Compression Creep?	54
3.7.5	Autogenous Shrinkage	55
3.8	Updating Long-Time Creep and Shrinkage Predictions from Short-Time Measurements	56
3.8.1	Updating Creep Predictions	57
3.8.2	Difficulties in Updating Shrinkage Predictions	60

<b>4</b>	<b>Structural Effects of Creep and AAEM</b> .....	63
4.1	Homogeneous Structures .....	63
4.1.1	Elastic-Viscoelastic Analogy .....	64
4.1.2	Change of Structural System .....	70
4.2	Age-Adjusted Effective Modulus Method .....	77
4.2.1	Background .....	77
4.2.2	Fundamental Equation of AAEM .....	80
4.2.3	Alternative Derivation of AAEM* .....	82
4.2.4	Ramifications of AAEM .....	83
4.2.5	Approximation of Relaxation Function .....	85
4.2.6	Simple Applications of AAEM .....	89
4.3	Nonhomogeneous Structures .....	92
4.3.1	Stress Redistributions Due to Differences in Age of Concrete	93
4.3.2	Stress Redistributions in Beams of Composite Cross Section	98
4.3.3	Effects of Nonuniform Drying .....	104
4.3.4	Stress Relaxation in Prestressed Members .....	117
4.3.5	Creep Buckling .....	132
4.3.6	Reduction of Flexural Creep Due to Cracking in Unprestressed Reinforced Concrete .....	139
<b>5</b>	<b>Numerical Analysis of Creep Problems</b> .....	141
5.1	Numerical Analysis of Structural Creep Problems Based on History Integrals .....	141
5.2	Efficient Rate-Type Creep Analysis .....	153
5.2.1	Generalized Trapezoidal Rule* .....	154
5.2.2	First-Order Exponential Algorithm* .....	159
5.2.3	Second-Order Exponential Algorithm .....	162
5.2.4	Non-Aging Kelvin Chain .....	166
5.2.5	Solidifying Kelvin Unit .....	169
5.2.6	Solidifying Kelvin Chain .....	170
5.2.7	Aging Kelvin Unit .....	173
5.2.8	Aging Kelvin Chain .....	174
<b>6</b>	<b>Uncertainty Due to Parameter Randomness</b> .....	177
6.1	Random Parameters in Creep and Shrinkage Model .....	178
6.2	Latin Hypercube Sampling of Parameters .....	182
6.3	Histograms and Statistics of Response .....	187
6.4	Bayesian Improvement of Statistical Prediction* .....	194
6.4.1	Background on Bayesian Statistics* .....	196
6.4.2	Method of Bayesian Analysis* .....	197
<b>7</b>	<b>Paradigms of Application, Phenomena Affecting Creep</b> .....	205
7.1	Drying Effects in Viaduct La Lutrive .....	206
7.2	Description of the KB Bridge in Palau and Input Data .....	207
7.3	Creep Structural Analysis Utilizing Commercial Program .....	211

7.4	Numerical Implementation and Algorithmic Aspects .....	213
7.5	Effects of Slab Thickness, Temperature and Cracking .....	216
7.6	Determination of Model Parameters .....	218
7.7	Results of Simulations and Comparisons to Measurements .....	221
7.7.1	Calculated Deflections .....	221
7.7.2	Calculation of Prestress Losses Due to Creep, Shrinkage, Cyclic Creep and Steel Relaxation .....	225
7.8	Excessive Long-Term Deflections of Other Box Girders .....	228
7.9	Approximate Multi-Decade Extrapolation of Medium-Term Deflection .....	232
7.10	Uncertainty of Deflection Predictions and Calculation of Confidence Limits .....	236
7.11	Precautionary Deflection-Minimizing Design and Tendon Layout ..	237
7.12	Deflection-Mitigating Layout of Tendons .....	240
7.13	Effect of Cyclic Stress Variations on Creep Compliance .....	242
7.13.1	History of Cyclic Creep Models .....	242
7.13.2	Macroscopic Strain Due to Small Growth of Microcracks* ..	243
7.13.3	Strain According to Paris Law for Subcritical Microcrack Growth* .....	246
7.13.4	Compressive Cycles via Dimensional Analysis and Similitude* .....	247
7.13.5	Cyclic Creep Compliance and Multi-Axial Generalization ..	249
7.13.6	Calibration by Existing Test Data .....	250
7.14	Effects of Cyclic Creep on Bridge Deflections and Cracking .....	252
7.14.1	Stress Distribution in a Prestressed Cross Section Under Variable Loading .....	252
7.14.2	Curvature and Residual Stresses Due to Cyclic Creep .....	254
7.14.3	Appraisal of the Magnitude of Cyclic Creep Effects in Structures .....	258
7.14.4	Recapitulation .....	265
7.15	Conclusions for Method of Analysis and Design .....	266

## Part II Advanced Topics

<b>8</b>	<b>Moisture Transport in Concrete .....</b>	<b>271</b>
8.1	Water in Concrete .....	272
8.2	Pore Fluids at Thermodynamic Equilibrium .....	276
8.2.1	Multi-Phase Porous Medium .....	276
8.2.2	State Equations .....	278
8.2.3	Capillary Pressure and Relative Humidity .....	279
8.2.4	Kelvin Equation .....	283
8.2.5	Sorption Isotherm .....	289
8.2.6	Free and Hindered Surface Adsorption, Disjoining Pressure and Its Continuum Thermodynamics* .....	293
8.3	Moisture Transport .....	301

8.3.1	Transport Mechanisms .....	301
8.3.2	Darcy's Law .....	303
8.3.3	Mass Balance Equation .....	309
8.3.4	Differential Equations for Moisture Transport .....	311
8.3.5	Scaling Properties .....	319
8.3.6	Effect of Distributed Cracking on the Rate of Drying .....	320
8.4	One-Dimensional Moisture Transport .....	321
8.4.1	One-Dimensional Diffusion Equation .....	321
8.4.2	Numerical Solution by Finite Differences .....	324
8.4.3	Drying of a Slab .....	344
8.4.4	Initial Drying and Analysis of Infinite Half-Space .....	351
8.4.5	Evolution of Total Water Loss from a Specimen .....	359
8.4.6	Effects of Variable Environmental Humidity .....	370
8.5	Spreading of Hydraulic Pressure Front into Unsaturated Concrete ..	377
8.6	Shrinkage and Stresses due to Nonuniform Drying .....	383
8.7	Effects of Self-Desiccation and Autogenous Shrinkage in Drying or Swelling Specimens .....	398
8.7.1	Recent Paradigm-Changing Observations .....	398
8.7.2	Improved Aging Characterization via a Model for Hydration	401
8.8	Creep and Diffusion as Processes Controlling Alkali-Silica Reaction	402
<b>9</b>	<b>Solidification Theory .....</b>	<b>407</b>
9.1	Growth of Volume Fraction of C-S-H .....	408
9.2	Basic Creep Model for Concrete .....	411
9.3	Basic Creep Compliance Function of Model B3 .....	412
9.4	Absence of a Characteristic Time as the Reason for Using Power Functions* .....	415
9.5	Asymptotic Matching Properties of Solidification Theory .....	417
9.6	Non-Divergence of Compliance Curves .....	422
9.7	Change of Sign of Relaxation Function .....	436
9.8	Thermodynamically Admissible Rheological Chains* .....	439
9.8.1	General Properties* .....	439
9.8.2	Relation to Retardation Spectrum* .....	442
<b>10</b>	<b>Microprestress-Solidification Theory .....</b>	<b>451</b>
10.1	Overview of Physical Mechanisms .....	452
10.2	Relevant Aspects of Pore Structure and Water Adsorption in Hardened Cement Gel* .....	454
10.3	The Concept of Microprestress and Its Relaxation .....	457
10.4	Generation and Relaxation of Microprestress .....	460
10.5	Unification of Microprestress and Solidification Models .....	463
10.6	Temperature and Humidity Effects .....	464
10.6.1	Effects on Creep .....	464
10.6.2	Hygrometric and Thermal Strains .....	469
10.7	Alternative Computational Approach: Viscosity Evolution Equation	470

10.8	Numerical Implementation . . . . .	472
10.8.1	Evaluation of Flow Viscosity . . . . .	473
10.8.2	Evaluation of Flow Strain Increment . . . . .	475
10.8.3	Incorporation of Transformed Times . . . . .	477
10.8.4	Incremental Stress Evaluation Algorithm . . . . .	478
10.9	Analysis of Experimental Data on Temperature Effect . . . . .	482
10.9.1	Basic Creep at Constant Elevated Temperature . . . . .	483
10.9.2	Transitional Thermal Creep . . . . .	489
10.10	Comment on Applications and Review of Main Points . . . . .	491
<b>11</b>	<b>Physical and Statistical Justifications of Models B3 and B4 . . . . .</b>	<b>495</b>
11.1	Main Criteria of Evaluation . . . . .	496
11.2	Theoretically Based Physical Justifications of Model B3* . . . . .	497
11.2.1	Overview of Mechanisms and Phenomena* . . . . .	498
11.2.2	Thermodynamic Restrictions* . . . . .	499
11.2.3	Microprestress Relaxation and the Question of Characterizing Creep Aging by Strength Gain* . . . . .	500
11.2.4	Activation Energy, Power Laws and Lack of Bounds* . . . . .	500
11.2.5	Diffusion Theory for Pore Water* . . . . .	501
11.2.6	Effect of Cracking* . . . . .	503
11.3	Statistical Aspects of Model Calibration and Validation . . . . .	504
11.3.1	Unbiased Statistical Verification of Model . . . . .	504
11.3.2	Importance of Validating Model Form by Individual Tests on Many Different Concretes* . . . . .	504
11.3.3	Need for Short-Time Data Extrapolation by Linear Regression . . . . .	508
11.4	Statistical Methods Applied to Model Evaluation . . . . .	510
11.4.1	Suppressing Database Bias Due to Nonuniform Sampling of Parameter Ranges . . . . .	515
11.4.2	Reducing Anti-High-Strength Bias . . . . .	517
11.4.3	Standard Least-Square Regression Statistics of the Database . . . . .	518
11.4.4	Bias Due to Different Density of Readings . . . . .	518
11.5	Statistical Comparison of Creep and Shrinkage Models . . . . .	519
11.5.1	Model Evaluation by Standard Regression Statistics . . . . .	519
11.5.2	Statistical Justification of Model B3 . . . . .	520
11.6	Statistical Justification of RILEM Model B4 . . . . .	524
11.6.1	Shrinkage . . . . .	524
11.6.2	Creep . . . . .	534
11.7	Analytical Methods for Predicting Concrete Creep from Its Composition* . . . . .	547
11.7.1	Predicting Creep and Shrinkage from Heterogenous Microstructure Using Homogenization Theory* . . . . .	548
11.7.2	Extracting Creep Properties of C-S-H via Cement Paste Homogenization* . . . . .	550

<b>12</b>	<b>Cracking and Fracture Mechanics Aspects</b> .....	551
12.1	Limitations of Simplistic Nonlinear Models for Concrete Creep ....	552
12.2	Fracture Mechanics Aspects and Crack Band Model .....	554
12.3	Role of Cracking and Irreversibility in Shrinkage .....	560
12.4	Role of Cracking in Drying Creep (Pickett Effect) .....	562
12.5	Role of Creep in Cohesive Fracture and Size Effect on Structural Strength .....	569
12.6	Derivation of Crack Opening Rate Effect from Fracture Kinetics at Atomic Scale* .....	574
12.7	Models Combining Damage and Creep .....	577
12.8	Microplane Modeling of Cracking Damage with Creep .....	589
12.8.1	Basic Ideas of Microplane Modeling .....	589
12.8.2	Incorporation of Creep with Aging and Shrinkage into Microplane Constitutive Laws .....	595
12.8.3	The lattice discrete particle model generalized for creep ....	601
<b>13</b>	<b>Temperature Effect</b> .....	603
13.1	Heat Transfer in Concrete .....	604
13.1.1	Heat Equation .....	604
13.1.2	Characteristic Times of Heating and Drying .....	607
13.1.3	Boundary Conditions for Heat Transfer .....	610
13.1.4	Role of Heat Convection* .....	610
13.1.5	Hydration Heat .....	613
13.1.6	Temperature Increase Induced by Hydration .....	617
13.2	Heat and Moisture Transfer, and Hygrothermal Effects in Heated Concrete .....	624
13.2.1	Structure of Bažant-Thonguthai Model .....	624
13.2.2	Distributed Source of Water .....	629
13.2.3	Isotherms at High Temperatures .....	632
13.2.4	Permeability at High Temperatures .....	636
13.2.5	Thermal Conductivity .....	640
13.2.6	Heat Capacity .....	642
13.2.7	Latent Heat .....	643
13.3	Strains and Stresses at High Temperature .....	644
13.3.1	Thermal and Hygral Volume Changes .....	645
13.3.2	Mechanical Properties at High Temperature .....	646
13.3.3	Extension of Creep Models to High Temperature .....	647
13.3.4	Application Example: Explosive Thermal Spalling Due to Microwave Heating .....	653
13.4	Finite Volume Method for Problems with Moving Interfaces* .....	657
13.5	Mass, Momentum and Energy Balance Laws* .....	658
13.5.1	Mass Conservation* .....	659
13.5.2	Momentum Balance* .....	662
13.5.3	Energy Balance* .....	664
13.5.4	Entropy Balance* .....	665

13.5.5	Heat Equation*	670
13.5.6	Balance Laws for Multi-Phase Media*	674
13.6	Comments on Multiphase Modeling of Hygrothermal Processes and Creep	679
<b>A</b>	<b>Viscoelastic Rheologic Models</b>	683
A.1	Maxwell Model	684
A.1.1	Compliance Function	684
A.1.2	Relaxation Function	686
A.2	Kelvin Model	687
A.2.1	Compliance Function	687
A.2.2	Relaxation Function	688
A.3	Rheologic Chains	689
A.3.1	Kelvin Chain	690
A.3.2	Maxwell Chain	691
A.4	Aging Rheologic Chains	692
A.4.1	Aging Maxwell Chain	693
A.4.2	Aging Kelvin Chain	694
A.5	Solidifying Rheologic Chains	696
A.5.1	Solidifying Kelvin Chain	696
A.5.2	Solidifying Maxwell Chain	698
<b>B</b>	<b>Historical Note on Old Creep Models</b>	701
<b>C</b>	<b>Estimates of Parameters Used By RILEM Model B3</b>	705
C.1	Sectional Approach	705
C.2	Prediction of Model Parameters	707
C.3	Material Approach	711
<b>D</b>	<b>Estimates of Parameters Used By RILEM Model B4</b>	713
D.1	Creep	714
D.1.1	Basic Creep Compliance	714
D.1.2	Additional Compliance due to Drying	715
D.2	Shrinkage	717
D.2.1	Drying Shrinkage	718
D.2.2	Autogenous Shrinkage	718
D.3	Effect of Admixtures	718
D.4	Simplified Strength-Based Model B4s	719
D.5	Effect of Temperature	721
D.6	Examples of Compliance Curves	723
D.7	Aging Effects	726
D.7.1	Aging of Elastic Modulus	726
D.7.2	Effect of Aging on Creep	733
D.8	Improvements of B4 Model	739
D.8.1	Better Prediction of Drying Creep	739
D.8.2	Anticipated Future Improvements of Model B4	745

<b>E</b>	<b>Creep Models Recommended by Design Codes</b> .....	747
E.1	General Structure of Creep Design Formulae .....	747
E.2	CEB and <i>fib</i> Model Codes .....	750
E.2.1	CEB Model .....	750
E.2.2	<i>fib</i> Model .....	752
E.3	ACI Model .....	753
E.4	GL2000 Model .....	755
E.5	JSCE Model .....	757
